

Part Contents

■ Some Basic F# Constructs	101
An F# List	102
<i>A List of Languages</i>	105
<i>Lambda Expressions</i>	107
A List of Regions	109
<i>Using if in a comprehension</i>	111
<i>Side-effects and Scope</i>	112
Using System.String	117
F# Query Expressions	118
<i>Try and With using Exception Pattern Matching</i>	119
<i>Laziness</i>	123
■ Additional RESX Resources	127
String Resources	127
Icon Resources	127
Bitmap Image Resources	128
Audio and File Resources	128
RESX Comments for non-string Resources	129
■ Record, Dictionary & Tuple Types	133
Record Types	134
Dictionaries	135
<i>Uniqueness of a Dictionary Key</i>	139
Linq & IEnumerable Collections	140

<i>Coding a Simple Function</i>	142
Tuples	143
<i>Dealing with multiple Native Names</i>	145
<i>Sorting a List</i>	146
A Warning about using the LCID	148
Category Totalling - Classic & Contemporary	151
<i>Mutable Value Types</i>	153
<i>Doing it "New Style"</i>	159
■ Enumerating the Flag Images	165
Capitalising the File Name	165
A List of Flags	166
Relative Paths	168
<i>An F# Active Pattern</i>	171
<i>Determining File Attributes</i>	172
<i>Invoking the Native PathRelativePathTo Method</i>	173
<i>A Tuple for the Flag and its relative path</i>	177
■ Where is Andorra?	179
Missing Region Data	179
HTTP File Access of a CSV/Text File	181
<i>Making the Web Request</i>	181
<i>Parsing the HTTP File Stream into a list</i>	184
<i>Debugging the Parse Process</i>	186
■ Loose Ends	189
Sequences	189
Ranges	190
Arrays	193
Sets - the basics	197
<i>Set Intersection</i>	197
<i>Set Union</i>	197
<i>Subsets</i>	197

<i>Set Differences</i>	198
<i>Supersets</i>	198
The F# Set Collection	198
The Map Collection	203
■ A Definitive Region Map with Names	205
Collating our Region List Evaluations	205
<i>More Non-uniqueness in the Region English name</i>	210

Accompanying Videos

17. A basic F# list	103
18. List comprehensions	106
19. The Lambda Expression	109
20. Creating a basic Region list - Parts I & II.	111
21. Side effects and value type scope - Parts I through III.	117
22. A Query Expression in FSI.	119
23. A try ~> with block and more on scope - Parts I & II.	120
24. Unit testing the region list comprehension.	121
25. Unit testing the query expression.	123
26. Lazy value types.	124
27. F# Record Type - Introduction	135
28. F# dict - Introduction.	138
29. Uniqueness of a dictionary key.	140
30. Basic Linq Extensions.	142
31. A basic function for displaying specific region names.	144
32. Tuples and sorting - Parts I & II	148
33. Category Totalling accumulation function.	154
34. Category Totalling - source data.	155
35. Mutable value types.	155
36. List.collect - how we specify function output.	156

37. Category Totalling - how old-style works.	157
38. Running old-style category totalling.	158
39. Tacking on the last accumulated element of the input list.	158
40. A more efficient List.append.	159
41. Category Totalling - new style. List.groupBy and List.map	161
42. Category Totalling - new style. Running the code.	162
43. Trimming the native name concatenation.	163
44. Category Totalling new style using an unsorted input sequence.	164
45. Upper-casing and listing the flag files.	168
46. Using the Windows native PathRelativePathTo method - Parts I through IV.	177
47. Using FtpWebRequest to access an internet file.	184
48. Parsing an internet file into a list.	185
49. Basic merging and folding of Microsoft & OpenGeoCode regions.	187
50. Sequences & Ranges.	191
51. Why you must specify the step for a decrementing range.	192
52. Basic Array creation.	196
53. Basic Set creation.	199
54. Timing - Seq vs List vs Set.	201
55. Some Set module functions.	202
56. An F# Map.	204
57. Determining the common region codes.	208
59. The definitive region map.	214
