

Manipulating Xml

Part Contents

■ Preliminaries	219
The Objective	221
Basic Linq Xml Access	222
<i>Xml Document Structure</i>	226
Interoperability and the Out Attribute	229
Type Extensions	234
.NET String.Format, F# sprint and F# Operators	236
<i>Regular Expressions</i>	240
<i>Defining an Operator</i>	241
A String Formatting Operator	243
<i>A limitation of the &= Formatting Operator</i>	246
<i>Object Boxing</i>	246
■ Xml XPath Navigation	249
Visual XPath Navigator	249
Linq XPath Extensions	251
<i>XDocument type extensions</i>	254
XElement Descendants Extension	257
■ Creating RESX Resources via Xml	261
Pre-requisites	261
Building a Flag Resources reference list	262
Creating Xml Elements and Attributes	264
■ A Console Application	273
	215

Adding a Console Project to a Solution	273
Program Entry Point, Debug Mode & Arguments	275
Program Structure	277
<i>References</i>	277
<i>Namespaces</i>	278
<i>Modules</i>	278
Open Namespaces	279
The Strings module	281
<i>Program Arguments</i>	281
<i>Literals</i>	283
<i>Intellisense, modules and tips</i>	283
The Operators Module	285
<i>String Formatting</i>	285
<i>Counter accumulation</i>	286
The Status Module	286
<i>An Unhandled Exception Trap</i>	288
The Global Module	290
The Extensions Module	291
The Choices Module	292
The Native Module	293
The Main Module	293
<i>The Windows Console - Displaying Unicode</i>	294
<i>Argument Validation</i>	295
Project and RESX File Validation	296
Flag Path Validation	298
Downloading Region Information	300
Merging Region Information	303
Updating RESX Elements	303
Post-processing	305
Running the code	306
■ Another Pause for Reflection	309

The Positives	309
The Negatives	310
Where next?	312

Accompanying Videos

60. Basic Xml access with Linq.	224
61. Basic Xml document structure.	226
62. Linq XElement and XAttribute.	228
63. The .NET Framework & the Out attribute.	229
64. Using the Out Attribute in F#.	232
65. Interoperability.	233
66. HasElement & HasAttribute type extensions.	235
67. List.zip.	238
68. String formatting using zip & fold.	239
69. Using Regex.Replace.	241
70. Defining an F# Operator.	242
71. The F# inline keyword.	242
72. Our string formatting operator - Parts I & II.	245
73. XPath Visualizer Tool.	251
74. Using Linq XPath extensions to select elements.	252
75. XDocument XPath extensions.	257
76. The XElement type extension tryDescendants - Parts I & II.	257
77. Collating all flag resource information.	264
78. Building the data elements - Parts I & II.	266
79. Verifying the RESX flag resources - Parts I & II.	269
80. Adding a console project to a solution.	274
81. The main body and arguments for AddFlags.exe	277
82. Program structure & modules - Parts I & II.	278
83. Strings, Literals & Intellisense.	286
84. Modules in AddFlags - Parts I through III.	293

85. The Main Module - Parts I through III.	306
86. Running the AddFlags Console Application.	307
